Giant pandas live mainly in bamboo forests high in the mountains of western China. They are easily recognized by their black and white coats. Their furry coats keep them warm in the cold mountain habitat. They spend most of their time roaming in and feeding on the bamboo plants.

They must eat 26 to 84 pounds of bamboo every day! Their enlarged wrist bones function as thumbs to help in gathering and eating the bamboo.

I have big flat teeth to crush the bamboo!

Giant Pandas are excellent climbers. They take shelter in dens but do not hibernate.
