All About Parrots

Parrots are birds that live mostly in tropical areas like the rain forest where it is hot and rainy. They live in large groups of 20-30 birds called flocks. They build their nests in small holes in cliffs or in trees.

There are over 350 parrot species including cockatiels, cockatoos, macaws and parakeets. Some parrots are brightly colored while others are white or gray. Parrots have curved beaks or bills, strong legs and clawed feet. They are “zygodactyl” meaning they have 4 toes on each foot, two facing forward and two facing backward.

Parrots eat seeds, fruit, nectar, small flowers and insects.

** Some parrots can imitate human voices!**
