All About Pumpkins

Name
Pumpkins grow from pumpkin seeds. Pumpkin sprouts grow from the seeds. Leafy vines grow from the sprouts. Yellow-orange flowers grow on the vines. Tiny green pumpkins grow after the flowers wither. The pumpkins grow larger and change to an orange color. Pumpkins are our largest fruit. Each pumpkin has about 500 seeds.

Pumpkins are used for decorations or jack-o’-lanterns. They are used to make pies, pudding, breads and other food. Pumpkin seeds can be roasted for a snack. Pumpkins are also used to feed farm animals.

Facts
Label the Life Cycle of the pumpkin.
