All About FISH

By ____________________
**Facts About Fish**

Fish are vertebrates. This means they have a backbone or spine. Most fish have bones but the shark skeleton is made of cartilage.

Fish spend all their life in the water. They use gills to get oxygen from the water to breathe. Most fish are cold-blooded and their body temperature is the same as the water. They have scales on the outside of their bodies. They use their fins and tails to move about in the water.
