An insect is an animal with six legs. Its body is divided into three main parts—head, thorax, and abdomen. An insect has a hard outer covering called an exoskeleton. Most insects have wings and a pair of antennae.

Insects go through metamorphosis or change. The stages of metamorphosis are egg, larva, pupa, and adult. Some insects are the butterfly, ladybug, bee, dragonfly and praying mantis.

1. Insects have __________ body parts. They are: __________, __________, & ____________

2. Insects outer covering is an __________________

3. Insects go through change called ____________________

4. What are the stages of metamorphosis?
   ______________  ______________
   ______________  ______________
**Facts About Insects**

An insect is an animal with six legs. Its body is divided into three main parts—head, thorax, and abdomen. An insect has a hard outer covering called an exoskeleton. Most insects have wings and a pair of antennae.

Insects go through metamorphosis or change. The stages of metamorphosis are egg, larva, pupa, and adult. Some insects are the butterfly, ladybug, bee, dragonfly and praying mantis.

**I learned...**

1. Insects have __________ body parts. They are: ________, ___________ & __________

2. Insects outer covering is an ____________________
