Bats are the only flying mammals. Bats are “nocturnal”, meaning that they are awake at night and asleep during the day. Bats hang upside down in groups or colonies to sleep. They might live in caves, trees, or hang from buildings. Bat babies are called pups. All bats can see, some better than us.

Many bats use sonar or echolocation to find food. They eat fruits, flowers, leaves, insects, frogs, fish, and other small animals. Some bats can eat 600 or more mosquitoes in a single hour!

Bats live between 4 to 30 years.

1. Bats use _____________ or _________________ to find food.
2. Bats hang ______________ _________________ to sleep.
3. Two things bats might eat are __________ & ____________.
4. What does nocturnal mean?
