Harp seals live in large colonies in the cold North Atlantic and Arctic oceans. They prefer to swim in the ocean and spend very little time on land. They can stay underwater for 15 minutes hunting small fish. Adult harp seals are gray with harp-shaped rings on their backs. Baby seals have fluffy white fur. Harp seals have blubber for insulation. They can live up to 30 years.

Seals can live up to 30 years. And the baby seal is on its own. The mother seal leaves the ice for about three weeks until they get off. They stay on the ice when they are small. They stay on the ice for about three weeks until they get their blubber. The mother seal leaves.
