

WINTER

Winter is one of the four seasons. It comes between fall and spring. It is the season with the shortest days and the lowest temperatures. It has the coldest weather with snow and ice depending on where you live. The trees are bare.

Some animals such as birds and butterflies migrate or go to warmer places. Other animals hibernate or sleep through the winter. Bears, snakes, frogs, and bats are some of those animals. Squirrels, raccoons, beavers, and skunks eat food that they have stored.

If you live where it snows, you could go sledding, go ice skating, go skate boarding or even build a snowman.

Winter is fun!

Star Words

bare
hibernate
migrate
